

## *Information for Patients and Healthcare Professionals (HCP):*

Pomalidomide is structurally related to thalidomide and is expected to cause severe birth defects or death to an unborn baby therefore:

---

Women of childbearing potential must always use effective contraception

---

Women of childbearing potential must have pregnancy tests prior to starting treatment and every 4 weeks, prior to each prescription, to ensure that they are not pregnant, except in the case of confirmed tubal sterilisation

---

Male patients with pregnant partners or partners of childbearing potential not using effective contraception must always use condoms (even if man has had a vasectomy)

---

If a female patient or female partner of a male patient suspects they are pregnant, they must contact their prescriber immediately

---

You **MUST** tell your prescriber immediately if you experience any symptom that causes concern

---

For complete information on the side effects of pomalidomide, patients should read the Package Leaflet and HCP should read the Summary of Product Characteristics

---

## *Information for Healthcare Professionals:*

### **Prescription Details**

Has the patient received counselling?	Yes / No
Childbearing potential assessment	WCBP / WNCBP / Male
If the patient is a WCBP is she using effective contraception?	Yes / No
If the patient is male, is he using condoms, if required?:	Yes / No

**WCBP:** Women of childbearing potential; **WNCBP:** Women of non-childbearing potential

A completed Prescription Authorisation Form must accompany each prescription to confirm that the patient continues to use effective contraception (if required) and, in the case of a WCBP, is having a pregnancy test every 4 weeks before each prescription to ensure they are not pregnant.
